The OTARD Neighborhood Antenna Pledge
(Over-The-Air-Reception-Device)

Dear neighbors,

Big telecom companies are proposing to install up to 800,000 new 5G-enabled wireless antennas in neighborhoods across America to facilitate the deployment of space-based communications satellites and the rollout of 5G. These antennas have not been tested for their long-term effects on human health and safety.

To streamline these deployment efforts, the telecoms have convinced the federal government to let them install their powerful radiation-emitting wireless transmitters *on private homes*, bypassing local authorities and ignoring the wishes of the community.** Their plan is to "partner" with homeowners to blanket communities with 24/7 radiation so they can sell subscriptions to their movie/video game/internet service.

While everyone has the right to install telecommunications equipment on their own home for their own use, no one should have the right to risk the health, privacy, security and property value of their neighbors for the sake of a private corporation's profit.

That's why we are asking all of our neighbors to consider signing the attached Neighborhood Antenna Pledge – a mutual neighborhood agreement to protect everyone from wireless antenna installations on private homes. We hope you will join us.

Sincerely,

*Over the last 50 years, a robust body of independent, peer-reviewed scientific research has emerged proving significant biological harm from exposure to radiofrequency (RF) microwave radiation ("wireless radiation"), including "clear evidence" of cancer, neurological and cognitive harm, heart abnormalities, reproductive effects and microwave sickness among other serious health problems.
